GLASGOW

RECONNECT

Design Brief 01

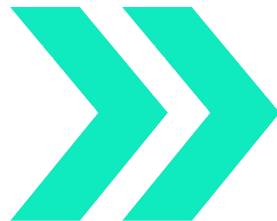

If we were to **RECONNECT** the land and communities between the city centre, the west end and the north of Glasgow, what would that look like?

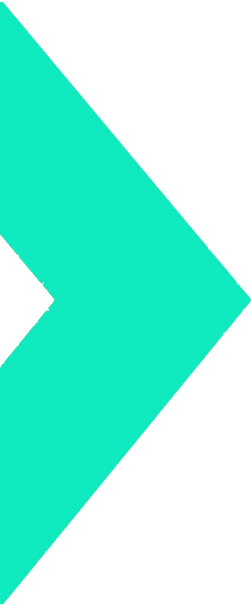

This Open Brief asks you to offer your ideas, hopes and designs for the future of the land that currently hosts the M8 Woodside Viaducts.

Describe in words, paintings, drawings or any other medium what the future of the land would look like if repaired.

REIMAGINE

Design Brief 02

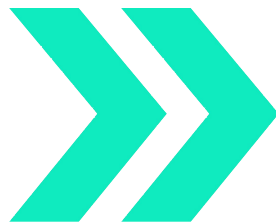

How would you **REIMAGINE** the M8 Woodside Viaducts to be greener, more resilient and more vibrant in a future Glasgow? Would you remove them entirely and replace them with something else? Or turn them into a different space completely?

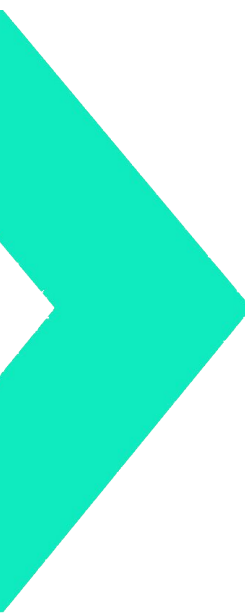

This brief asks you to think about how you creatively interpret this future vision through different media.

Could you write a song about this future? Develop renders of these new spaces? Or develop a brand, identity or graphical style that refers to the new function of this space?

REWILD

Design Brief 03

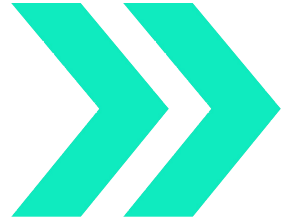

Could the M8 Woodside Viaducts become a key nature corridor? Could we **REWILD** it to encourage a better relationship between people and nature?

This brief asks you to give voice to the natural world, encouraging wildlife to thrive within the city centre.

Could the viaducts be retained while serving as a wildlife habitat and a key nature corridor? Could the canals be extended through the land that the viaducts currently sit on?

REPURPOSE

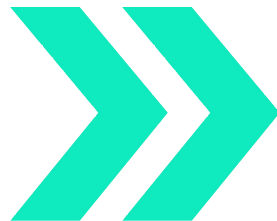

Design Brief 04

As we move toward a more circular economy and environmentally friendly practices, can we **REPURPOSE** the M8 Woodside Viaducts to be something completely different to what they are now?

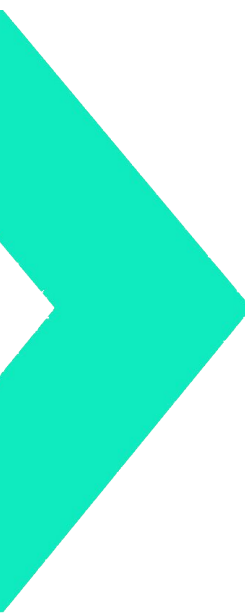

Could the concrete be turned into something wildly different from what it is now? Could the road be removed with the viaduct pillars remaining, and encouraged to become an urban haven for wildlife?

This brief asks you to think about the embodied carbon within the pillars, how we might reuse and repurpose human-built objects, and how we can design more sustainably.

REMODEL

Design Brief 05

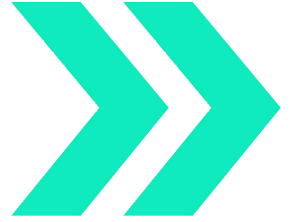

If the M8 Woodside Viaducts were removed, could we **REMODEL** the land to be wildly different from what it is now? Could the land become a unique visitor attraction?

In Valencia, they turned a river that flooded into one of the most-visited parks and public spaces in the world. In Oslo, the city centre has become one of the most walkable cities in Europe.

How would you show this remodelling of the space? Through architectural renders? Performance art? Film?

RENEW

Design Brief 06

Could the land that currently hosts the M8 Woodside Viaducts allow something completely new to arrive in its place and **RENEW** the area?

With primary schools, secondary schools and universities on either side of the current road network, could a new piece of architecture be built to support young education and play?

Could we build an incredible new civic building that supports young people? Could we create a network of community spaces that support personal growth, regardless of a person's age?
